

Our Add-ons

Reservation software

With the option of an included reservation software (appointment booking/table reservation), beVirtualized can provide added value to your business. By integrating an easy-to-use reservation solution on your website, you can offer your customers a quick and convenient way to make reservations.

Individual Logo

Give your business a unique identity with a modern and custom logo from beVirtualized. Stand out from the crowd.

Personalized E-Mail

We create a personalized email address for your company that presents a representative image of your business and conveys a sense of professionalism. For example: business@bevirtualized.com.

Marketing accessories

Flyers can help you draw your customers' attention to the ordering functionality on your website and redirect them from ordering platforms to your own site. This way, they can order directly through your website, and you can reap the benefits it offers. This includes greater control over the ordering process and the ability to utilize customer data to enhance your business.

Google Maps

Increase your online presence and your company's reach by having us set up a professional Google Maps presence for you.

Restaurant Package

In addition, we offer the development of a customized restaurant package. This includes an internal ordering and reservation software, similar to our sample page. This allows restaurants and gastronomy businesses to operate more efficiently and provide their customers with a convenient ordering and reservation service.

More

Upon request, we can also develop additional features for your website. Virtually all requests are achievable. For more details, please inquire.
